

Network Access Gone Rogue

Roaming workstyles are the new norm. Workers are dispersed, on the move and increasingly blending their work and personal lives. Whilst the rise in cloud-based services like Office 365 has reduced the need for VPN access it has also resulted in more users than ever accessing their business data from mobile devices outside of the office, and traditional security measures are falling short.

The Way We Work Has Changed

Traditional approaches to security – firewalls, proxy servers and anti-virus solutions – are simply not enough to avoid off-network security issues.

Why Not Protect Here

Reduce security alerts by 2-10X by adding Umbrella as the first layer of defence in your security stack, which will block garden-variety threats that add noise as well as advanced threats that no one else sees.

The Value Delivered By Cisco Umbrella

1. Secure Without Downtime

68% of breaches take months or longer to discover

Umbrella maintains 100% uptime, so you can constantly protect users and guests from malware, ransomware and C2 callbacks.

3. Go Off The Grid

22% of corporate traffic will bypass perimeter security by 2021

Umbrella offers an added layer of cloud-delivered protections for all users, both on and off the corporate network, meaning that workers using their mobiles or tablets are protected as well.

5. Manage From One Place

68% of users selected Umbrella because of its simple management capabilities

You can apply Umbrella policies directly in the dashboard, so you can be on the lookout from anywhere in the world.

2. Get A Better Lookout

By 2020, 1/3 of successful enterprise attacks will occur via shadow IT resources

With Umbrella, you get additional visibility into all internet activity to protect across all locations and all users.

4. Fortify In Minutes

71% of respondents reduced remediation time by 50% or more

Umbrella helps you provide powerful, effective security across the network without the usual operational complexity, and automatically identifies attacks before they happen.

Enterprise-Grade Security for Any Business

At amatis we see Cisco Umbrella as a way that our customers can cost-effectively deploy Enterprise-Grade Security that protects both their corporate network and their end-users regardless of their location and means of connection.

As a Cisco partner, we can provide you with the Cisco Umbrella solution as either an integral part of your connectivity services from amatis or as a stand-alone service.

If you would like to find out more and explore the options available to you, please give the amatis networks team a call on **0118 321 9944** or visit our website **www.amatisnetworks.com**
